

Industry

The history of the Belgian company goes back more than 200 years. It has existed under the name Umicore since 2001. Umicore is a global group specialising in clean mobility materials and recycling. It is engaged in materials science, chemistry and metallurgy.

Umicore produces for the energy, automotive, construction and electronics sectors and recycles precious metals.

The challenge

At Umicore, the industrial doors are in the midst of various demanding industrial processes, so as an end customer they absolutely demand the highest level of robustness and reliability, and this for the long term, from their industrial pedestrian doors and their fire doors.

The Heinen solution

The Heinen Metal+ door, whether fire resistant or not, is ideally suited to meet these end customer expectations. The screwed construction of the door and the mortar filling of the frame ensure the highest level of opening and closing cycles and extremely reliable long-term operation. This construction also ensures quick and easy repair if a door unit is damaged. In addition, these doors come with a 15-year warranty.

The proximity of our partner network facilitates fast and decisive quick and decisive support.

Year of cooperation

Since 2007

Key figures

More than 300 doors:
Metal+, fire resistance, burglary resistance
Swing doors
